**Linux & Solaris Graphics Drivers Available for Dell 8100 Laptop**  
*Xi Graphics Accelerated-X™ Summit v2.1 supports latest Inspiron model.*

DENVER ---- Xi Graphics, Inc. announced today the release of both Linux and Solaris accelerated graphics drivers in Summit v2.1 for Dell s new Inspiron 8100 Laptop. The 8100 has an ATI Mobility RADEON 7500 graphics chip and a 1.2GHz CPU. The Company claims that the graphics performance of this laptop, which has 64 MB of Video Memory, almost puts it into a portable workstation category. Viewperf benchmarks produced by the OpenGL conformant drivers are published on Xi Graphics Web site, [www.xig.com](http://www.xig.com).

The Summit v2.1 drivers can be downloaded for testing. A license key can be purchased on-line from Xi Graphics that is e-mailed to the user. Upon installation of the license key, the demo becomes permanent product. Drivers for each OS are available in four Editions, depending upon specific software features desired. Prices for license keys range from \$69 to \$139, including free customer support via phone or e-mail from Xi Graphics in Denver, Colorado. The Company boasts that its customer support is prompt, courteous, competent, and free.

**About Xi Graphics Inc.**

Xi Graphics Inc., has developed and licensed accelerated graphics drivers for Linux and UNIX systems since 1994. For information about the Company, visit [www.xig.com](http://www.xig.com).
