Xi Graphics Releases Graphics Driver for Dell Latitude C400

Accelerated-X™ Summit v2.1 support available for Linux

DENVER ---- Xi Graphics, Inc. announced today the release of four high-performance graphics drivers for the Dell Latitude C400 laptop that uses the Intel i830 graphics chip. The drivers differ in feature sets and in 2D or 2D+OpenGL 3D capabilities. Each driver is available in demo mode for download from the Xi Graphics Web site, www.xig.com, for compatibility and performance testing. Users can purchase a Summit License Key on-line which when installed converts a demo into permanent product. A license is required for each computer on which an Accelerated-X Summit driver is used as permanent product. Prices for the License Keys range from \$69 to \$139, depending upon the driver.

Customer support, which the Company claims is prompt, courteous and competent, is also free via phone and e-mail to its Denver, Colorado facilities.

According to Xi Graphics, XFree86 claims its driver which comes with the Linux operating system supports this graphics hardware, but the XFree86 graphics drivers would only operate at 640x480 resolution instead of the laptop's 1024x768 LCD capability.

About Xi Graphics Inc.
